

lexi Test report

Patient:	lexi	Species:	Canine	Patient ID:	2508062
Client:	marcos	Gender:		Age:	

AI Aided Diag. Explan.

It is recommended to add a blood smear test to evaluate platelet and other cell morphology, as well as coagulation (such as cD-dimer) to assess whether coagulation function is normal, based on clinical manifestations and medical history.

Note: Due to the complexity and individuality of disease diagnosis, the report interpretation is only for your reference. Please consult your doctors for clinical diagnosis results.
The results only applies to this test sample.

Lab item	Current result
HW Ag	Negative
E.canis Ab	Positive
Lyme Ab	Negative
Anapl. Ab	Positive

Operator:

Report Explan.

HW Ag

A positive result indicates the canine heartworm antigen is present in the sample. Even if the result is negative, the possibility of HW-infection cannot be ruled out.
* As with all other diagnostic tests, a single test result should not be used as the sole basis for clinical diagnosis but rather should be comprehensively evaluated by a veterinarian in combination with clinical symptoms and other laboratory test results.

E.canis Ab

A positive result indicates the canine Ehrlichia canis antibodies are present in the sample. Even if the result is negative, the possibility of E.canis-infection cannot be ruled out.
* As with all other diagnostic tests, a single test result should not be used as the sole basis for clinical diagnosis but rather should be comprehensively evaluated by a veterinarian in combination with clinical symptoms and other laboratory test results.

Lyme Ab

A positive result indicates the presence of canine Lyme antibodies in the sample. Even if the result is negative, the possibility of Lyme-infection cannot be ruled out.
* As with all other diagnostic tests, a single test result should not be used as the sole basis for clinical diagnosis but rather should be comprehensively evaluated by a veterinarian in combination with clinical symptoms and other laboratory test results.

Anapl. Ab

A positive result indicates the presence of canine Anaplasma phagocytophilum/ Anaplasma platys antibodies in the sample. Even if the result is negative, the possibility of Anapl. Ab -infection cannot be ruled out.
* As with all other diagnostic tests, a single test result should not be used as the sole basis for clinical diagnosis but rather should be comprehensively evaluated by a veterinarian in combination with clinical symptoms and other laboratory test results.

Note: Due to the complexity and individuality of disease diagnosis, the report interpretation is only for your reference. Please consult your doctors for clinical diagnosis results.
