KITTY Test report

Patient: KITTY Species: Canine Patient ID: 2508245

Client: OH Gender: Male Age:

Al Aided Diag. Explan.

It is recommended to add a blood smear test to evaluate white blood cell morphology, as well as tests of liver and kidney panels, electrolytes, protein level, and inflammatory markers (such as cCRP and fSAA) to assess overall health status or inflammation level, based on clinical manifestations and medical history.

Note: Due to the complexity and individuality of disease diagnosis, the report interpretation is only for your reference. Please consult your doctors for clinical diagnosis results.

The results only applies to this test sample.

cPL

Result indications: <200.0 ng/mL Normal 200.0-400.0 ng/mL Suspected >400.0 ng/mL Abnormal Clinical significance:

cPL is the organ-specific lipase secreted by the pancreas specificity, and is currently the most sensitive indicator for early diagnosis of canine pancreatitis on the market. The increase may indicate pancreatitis.

Note: Due to the complexity and individuality of disease diagnosis, the report interpretation is only for your reference. Please consult your doctors for clinical diagnosis results.

The results only applies to this test sample.
