**Diagnosis implications:**  
**Anemia**  
**Monocytosis**

**Leucocytosis**      **Lymphocytosis**

## Report Explan.

|                      |                                                                                                                                                                                                                           |
|----------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Anemia</b>        | It occurs in anemia caused by various reasons, such as insufficient hematopoietic materials, hematopoietic dysfunction, excessive destruction of RBC, or blood loss                                                       |
| <b>Leucocytosis</b>  | It occurs in bacterial infection, burn, post-operation, malignant tumor, leukemia, etc                                                                                                                                    |
| <b>Lymphocytosis</b> | It occurs in juvenile animals, reactions after vaccination, infections (such as ehrlichia), chronic enteritis/ cholangitis, tumors (such as lymphocytic leukemia, lymphoma, thymoma), hypofunction of adrenal cortex, etc |
| <b>Monocytosis</b>   | It occurs in stress response or corticosteroid response, bacterial/fungal/protozoal infections, immune-mediated diseases, paraneoplastic reactions (such as lymphoma), monocytic leukemia, etc                            |

Note: Due to the complexity and individuality of disease diagnosis, the report interpretation is only for your reference. Please consult your doctors for clinical diagnosis results.  
The results only applies to this test sample.
